RE: Cygnus Inc. Now Offers New Network Lock for Healthcare

Petoskey, Michigan based Cygnus Incorporated now has a network-based lock solution as a security option for all of its wall mounted computer workstations. The new, networked lock will make it easier for the staff to access the cabinet with the simple swipe of a proximity card. The new lock will also make it easier to monitor access by creating a real-time audit trail for each cabinet.

One of the many features of this lock system is the ease of administration. Users can be added and deleted, access restricted to certain floors, and much more all from a central location with the use of a simple software interface.

The lock is powered over the ethernet network (PoE) so there is no need for an additional power supply to be dropped by an electrician. Setup is simple due to the lock being a true IP device.

Robert Waugh, President of Cygnus, said of the new lock, "We are excited about the integration of the network lock into our complete line of workstation solutions. This really answers a need we see in the industry. Not only is this a giant step for the end user but for the administrator as well."

Cygnus was founded in 1988. Cygnus manufactures wall mounted computer workstations, medication boxes and articulating arms designed for form, function, and flow. By anticipating the needs of healthcare facilities Cygnus helps relieve intense workloads by developing solutions that keep caregivers close to the patients.
